INTRODUCTION

Computer Science graduate (BE, 8.8 CGPA) and aspiring full-stack developer with hands-on experience in ASP.NET Core, React and SQL Server. Gained Agile/Scrum team experience at Cognizant while building Clinic-Flow, a scheduling platform, with SOLID-based design. Strong in data structures, OOP and core CS fundamentals, and eager to build reliable, well-tested software as a Software Developer.

EDUCATION

The Oxford college of Engineering — **Nov 2022 – May 2026**
Bachelors of Engineering in Computer Science - ***CGPA – 8.8/10.0*** — *Bangalore, India*

Swamy Vivekananda Rural PU College — **May 2020 - Aug 2022**
12th Grade, PUC - ***Percentage*** - ***89%*** — *Bangalore, India*

M Tres High School — **Jun 2019 - Apr 2020**
10th Grade, SSLC - ***Percentage – 87%*** — *Bangalore, India*

TECHNICAL SKILLS

Languages: Java, C, C#, HTML, CSS, JavaScript, Typescript.

Framework: React JS, Node JS (Express JS – REST API), ASP.NET Core (Web API, Razor), Entity Framework Core.

Database: SQL, MongoDB.

Developer Tools: VS Code, Visual Studio Community, Git & GitHub, Eclipse, Postman, MySQL, MongoDB Compass, Dockers.

Cloud & Deployment: Azure App Service, Azure SQL, Azure Static Web Apps.

INTERNSHIP

Cognizant Technology Solutions: Programmer Trainee Analyst (Feb 2026)

Worked in an Agile/Scrum team of 5, joining sprint planning, daily stand-ups and reviews while building ClinicFlow, a full-stack scheduling system using ASP.NET Core, React and SQL Server. Applied SOLID principles and layered architecture to keep the code modular and testable, and used Git with shared branches and code reviews for team collaboration.

PROJECTS

ClinicFlow: Patient Scheduling & Resource Optimization System:

- Developed, as part of a 5-member Scrum team, a full-stack scheduling platform using **ASP.NET Core, React, Entity Framework Core, and SQL Server**.
- Implemented **appointment scheduling, provider availability, resource allocation, conflict detection, and waitlist management**.
- Added **JWT authentication, role-based authorization, audit logging, and automated testing** with NUnit/Moq.

Real-Time Chat Using Java Sockets:

- This project demonstrates a client-server-based communication system built with Java Sockets, enabling users to exchange text messages in real-time over a network.
- The project highlights the practical use of Java networking concepts, such as ServerSocket, Socket, input/output streams, and multithreading, to create a Messenger-like environment.

To-Do List App (Full-Stack, Deployed on Azure):

- Built a full-stack to-do app with a React front end and an ASP.NET Core REST API (create, read, update, delete) backed by SQL Server. Deployed the front end on Azure Static Web Apps and the API on Azure App Service with Azure SQL. *Live: [todo-app] | GitHub: [repo]*
